**Subject: Endorsement Letter**

To Whom It May Concern,

Steel International Contracting Co. Ltd. is a complete Engineering, Procurement & Construction (EPC) Company located in Dammam, Saudi Arabia. We have multiple construction project locations across the Kingdom of Saudi Arabia, where we usually require multiple generators and heavy equipment's such as cranes, man-lifts, buses for labor transportation, etc. The usage of Diesel fuel is usually very high at all of our construction site locations.

TEKH Enterprises Inc. introduced the "DS-600i" product, a revolutionary product that will save on fuel consumption, extend equipment life, **and help the environment.**

In order to test the DS-600i products ingenuity, we pilot tested 2 of our Perkins, PI-22.3P model generators at our project site locations and found amazing results. With a **28.70% reduction** in fuel consumption at our ITHRA Site and a **12.32% reduction** at Nairyah site. The visible black smoke reduced to a great extent and our maintenance team had seen lesser issues than usual.

Simultaneously, we started using the product to our transportation busses and vans, so far we have seen magnificent improvement in the overall performance of the engines and we are enjoying an overall increase of 5% efficiency in all of our equipment.

We have not had any negative effect to any of our equipment or vehicles whatsoever using the DS-600i product.

We, as Steel International would definitely recommend the use of this product DS-600i to all your equipment so to enjoy the best performance, efficiency output and overall reduction in harmful emissions and be a part of Environmental friendly industry.

Yours Sincerely,

Mohammed Abdul Qadir  
Logistics & Procurement Manager  
Steel International Contracting Co. Ltd.
